EXECUTIVE SUMMARY

51% of All Vehicle Sales Are Loss-Making

Core Segments

Sedans, SUVs, and Trucks — the backbone of the portfolio — are all operating at a loss.

High-Volume Brands

Ford, Chevrolet, and Nissan drive the largest revenue — and the largest losses.

Volume Over Margin

The current sales strategy prioritizes transaction count at the expense of profitability.

Revenue vs. Profit

Revenue is growing, but the business is operating at a significant and widening loss.

⚠ **Sales growth is coming at the expense of profitability.** Without a strategic reset, increasing volume will only deepen losses.

Made with GAMMA

OVERALL BUSINESS PERFORMANCE

Strong Revenue. Negative Profit.

Total revenue	Total profit	Average price	Overall margin
$7.49B	-$85.1M	$13,607	-8.52%
$7,487,578,136	-$85,103,114	per vehicle	

The Core Problem

Total revenue stands at **$7.49B**, yet the business reports a total profit of **-$85.1M** at an overall margin of **-8.52%**. The average vehicle sells for $13,607 — below the cost to sell it.

What This Means

High revenue is not translating into profit. Sales growth is being fueled by high-volume, low-margin transactions. Every additional unit sold under the current model deepens the loss.

PROFITABILITY BREAKDOWN

Loss-Making Sales Dominate the Business

More than half of all transactions are unprofitable. This is not a margin squeeze at the edges — it is a structural profitability failure embedded at the core of the business model.

51%

Loss-Making Sales

Over half of all vehicle sales generate a negative margin

-8.52%

Overall Margin

The business-wide margin reflects a deeply unprofitable sales mix

-$85.1M

Total Profit

Net loss position despite $7.49B in total revenue generated

REVENUE DRIVERS

Revenue Is Concentrated — But Concentration ≠ Profitability

A small number of brands account for the vast majority of revenue, creating significant concentration risk.

⚠ High revenue from key brands is masking deep profitability failures within those same brands.

Ford

Dominant revenue contributor — and the top driver of losses

Chevrolet

Second-largest revenue source, with deeply negative margins

Nissan

Third-ranked by revenue — consistent loss-making pattern

Made with GAMMA

PROFITABILITY DRIVERS

Top-Selling Brands Are the Primary Drivers of Losses

The brands generating the most revenue are also generating the largest losses. Increased sales volume is not improving the margin — it is amplifying the deficit.

Ford

Highest revenue contributor. Also the single largest source of loss across the portfolio.

Chevrolet

Strong volume, negative returns. Each additional sale widens the loss position.

Nissan

Significant revenue presence but consistent negative margin contribution.

Increased sales are amplifying losses — particularly within these core, high-volume brands.

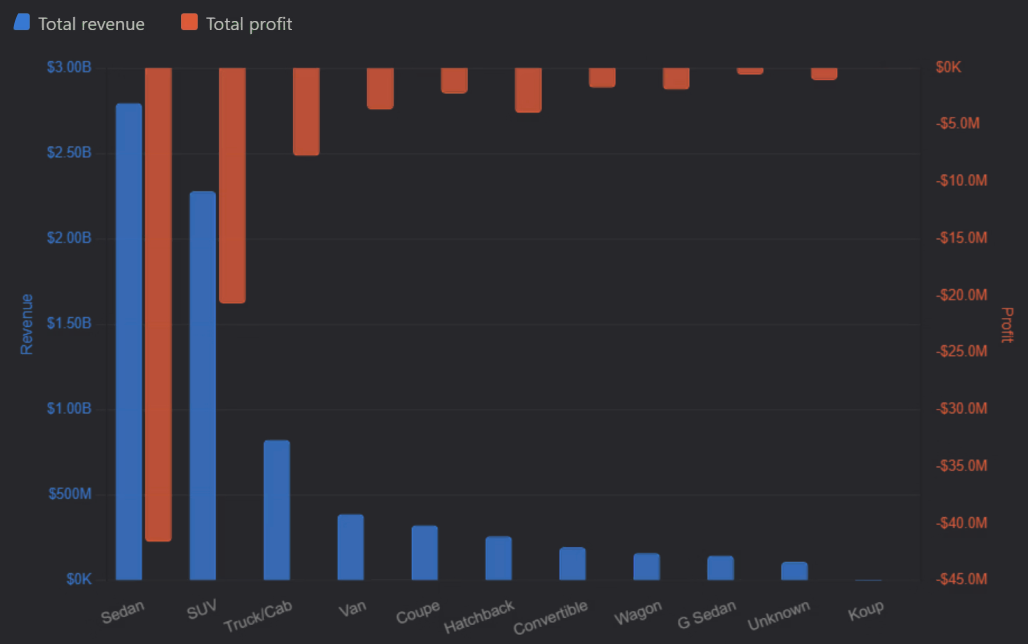
PRODUCT-LEVEL ANALYSIS

Our Most Popular Products Are Also Our Least Profitable



Revenue axis (left) · Profit axis (right) · Grand Total excluded from chart

Core Segments Are Loss Leaders

Sedans and SUVs drive the majority of revenue — but both segments post deep negative profits. Trucks follow the same pattern.

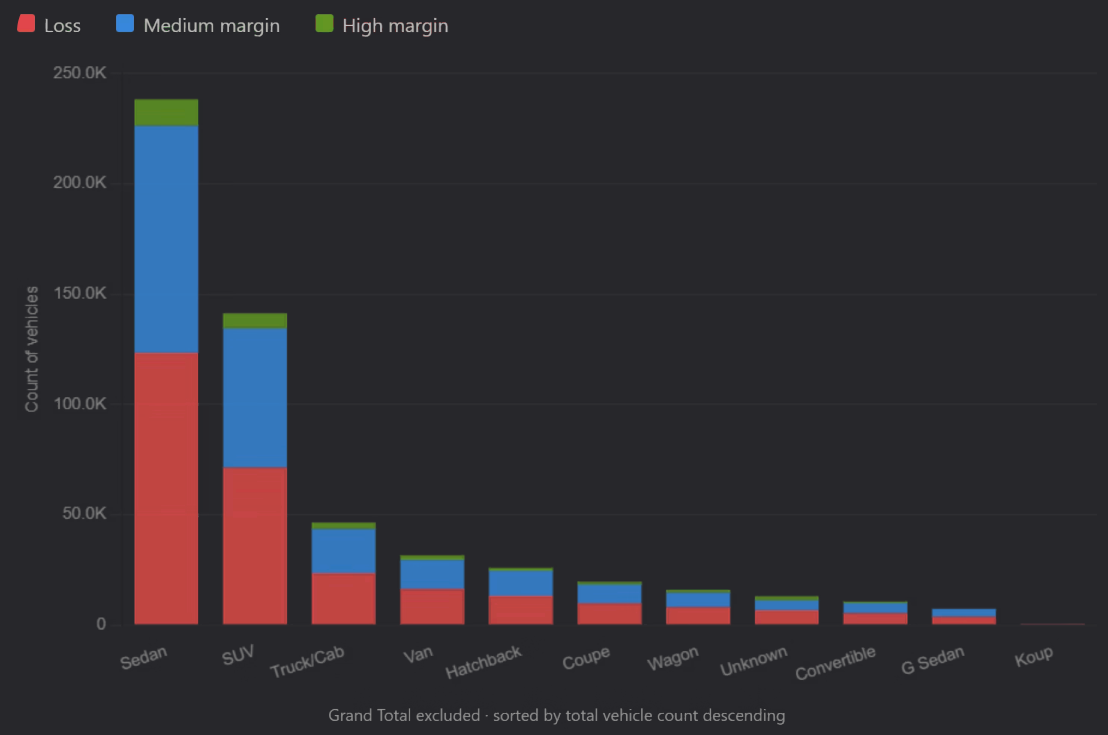
Profitability issues are not peripheral. They are structurally embedded in the highest-demand categories of the product mix.

⊗ Selling more of our core vehicles makes the loss problem worse, not better.

Made with GAMMA

MARGIN DISTRIBUTION

Most Losses Come From Our Most-Sold Vehicle Types



Margin by Body Type

Sedans account for the highest count of loss-making transactions, followed closely by SUVs and Trucks. Medium and high-margin sales are present but vastly outnumbered.

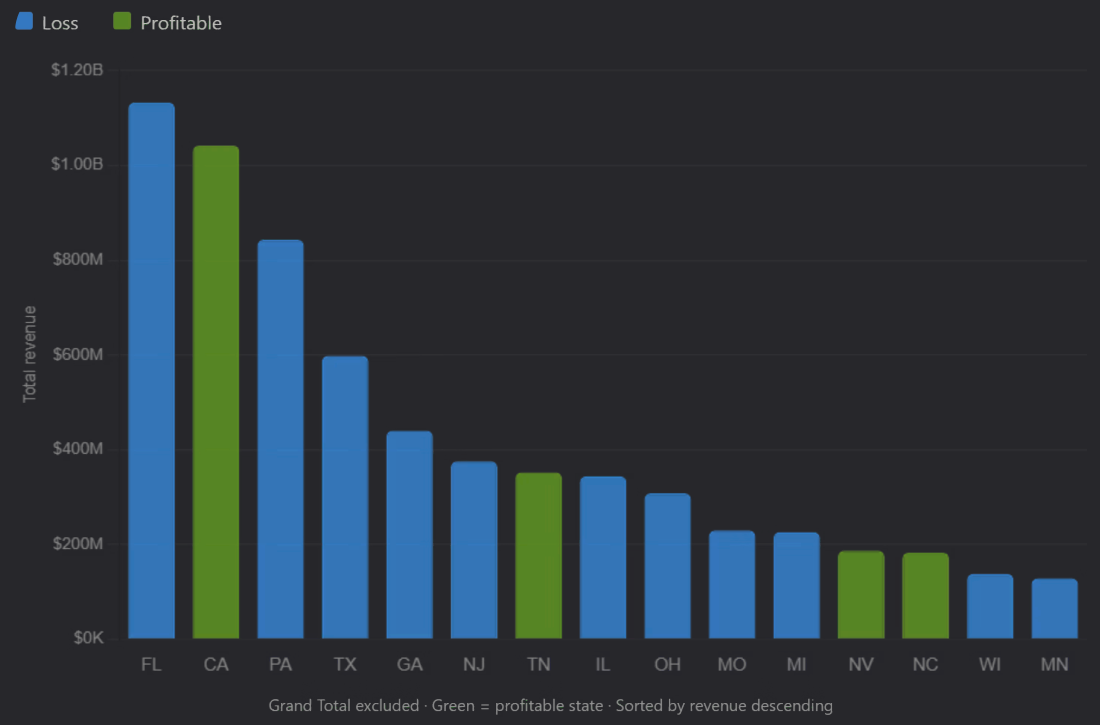
The concentration of loss-making sales in the highest-volume body types confirms this is a **structural issue** — not an outlier problem.

⚠ Loss-making sales are not scattered — they are concentrated exactly where volume is highest.

Made with GAMMA

REGIONAL PERFORMANCE

The Issue Is Systemic, Not Regional



Losses Span Key Markets

Florida, Pennsylvania, Texas, and other high-revenue states all operate at a loss. California is a notable exception — one of the few large markets generating positive returns.

The loss pattern is not geography-driven. It persists across diverse markets with different customer bases and competitive dynamics.

Because losses are widespread, regional fixes will not solve the problem. A systemic strategy change is required.

STRATEGIC RECOMMENDATIONS

Shift From Volume-Driven Sales to Profitability-Focused Growth

Fix Pricing Strategy

Review pricing across high-volume brands and body types to ensure no vehicle is sold below cost. Establish minimum margin floors.

Focus on Profitable Segments

Prioritize high-margin vehicles and actively reduce reliance on consistently loss-making product categories.

Reduce Loss-Making Sales

Implement controls to limit transactions that consistently generate negative margins — regardless of volume targets.

Align KPIs to Profitability

Shift performance incentives from sales volume to profit-based targets to drive sustainable, margin-positive growth.

> **Sustainable growth requires profitability — not just higher sales volume.**
